

Software

We can accept files in a wide range of Mac and PC formats - submitted via our 20mb email server; uploaded to our ftp or burnt to CD.

Mac

Adobe Creative Suite (Illustrator*, InDesign, Photoshop, PDF) and Quark Xpress.

*When submitting Illustrator files, please outline text.

PC

Word, Excel, Powerpoint, Adobe Acrobat PDF.

CreoScitex & Fiery Rips

Providing the latest colour management software for excellent manipulation of colour on the press.

bd³i Online

A secure online internet ordering system for standard template designs – perfect for regular ordering of business cards, as well as flyers, posters, personalised mailers etc.

Ideal for multi-office use of standard design templates that can be amended online by the local office inserting their own contact details; images; text etc.

Personalisation

Darwin

Personalisation software providing the facility to handle from simple through to the most complex variable data or personalised details. Including text; data driven graphs; logos and images.

XMPie

Graphics-based personalisation software – designed in Photoshop via InDesign.

Software that enables an integrated solution to create personalised mail pieces, set-up personal URL websites and send personalised e-mails. Through detailed reporting linked to the software database, you can track campaign response and develop truly measurable marketing campaigns.
